## research & development

Api designs and produces dozens of high technology resin formulas used as protective coatings. The consistent quality of Api products is guaranteed by the company's UNI EN ISO 9001:2008 compliant Quality System, which entails strict controls throughout the production process, from raw materials to the finished Api system and its application.

All our products are developed in Api's research and development laboratories and many have been designed to meet the needs of individual customers. And since the outset, close relations with universities, designers, major research centres and raw materials producers have driven the innovation, development and quality improvement which have led to resin-based formulas that have chemical and physical characteristics which are hard to find in other materials.
